

Rialto Energy

Rialto Energy has successfully drilled to the planned final depth of 3522m measured depth below the rotary table at the Gazell-P4 development well off the Ivory Coast.

This has taken 28 days from spud to target depth.

The well has encountered encouraging oil and gas shows through the Upper Cenomanian and gas shows through the Lower Cenomanian reservoir intervals.

These will be evaluated by wireline logging, fluid and pressure sampling.
