

Rialto Energy

Rialto Energy has started drilling the Gazelle-P4 development well offshore Ivory Coast that is planned to be used in the Gazelle development.

Gazelle-P4 will test the oil potential of the UC-2 and UC-4 oil reservoirs as well as the gas potential of the UC-3, UC-5, LC-1 and LC-2 gas reservoirs discovered by the Ivco-12 and Ivco-21 wells.

The well is expected to take 45 days to drill with the Transocean GSF Monitor drilling rig.

If successful, it will be suspended for use in the Gazelle development. A final investment decision on the development is targeted by the end of the year.
